

Trustix™ Enterprise Firewall Product Datasheet

Small/ Medium Business

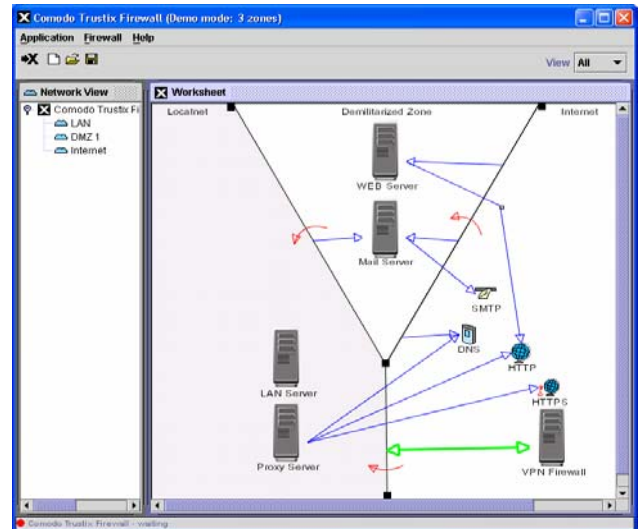

Enterprise Firewall- Total Perimeter security for Mission Critical Data

Hackers and e-terrorists stalk the internet. Without a firewall your business is easy prey.

Whether you run a small business or an enterprise scale corporation, Trustix™ have a Firewall solution to meet your needs. Our Firewalls are scalable from the ease of use needed by a SME to the stringent security and functionality demanded by a government. Sitting between your internal network and the outside world (Internet, External Servers, Branch Office networks, Wireless connections etc), a properly configured firewall is vital to the prevention of destructive attacks from hackers, data thieves, Trojans, worms and virus propagators.

Deployment of DMZ's, VPNs and corporate security policies is simplified with the point-and-click WYSIWYG interface. Securing your company's data from outside attacks has never been quicker, easier or more cost effective than with the Trustix™ Firewall.

Trustix- the inventors of WYSIWYG Firewalls

All the security that Trustix firewalls confer upon your business would be for nothing if it was impossible to implement. Trustix take a truly revolutionary approach to the recondite issue of firewall configuration using a perspicuous and highly intuitive WYSIWYG interface. The easily used GUI enables you to visualize and configure your firewall policy, DMZ's (up to 24 zones), port forwarding, network address translation and virtual private network settings in a clearly intelligible manner- no more arcane command lines or constant administrative stress. Most importantly, the underlying rules generated by the program are then fully optimized before being deployed- thereby optimizing the security and performance of your firewall's architecture, and avoiding errors and duplications. The administrator's job just became a lot easier!!

- **Visualize** DMZs with drag and drop security policy deployment
- **Secure** your network with dynamic NAT and Mac Address authentication
- **Integrate** branch offices with 3DES encrypted VPN tunnels
- **Accelerate** internet access times with proxy caching server
- **Authenticate** remote workers with PKI X.509 certificates
- **Ensure** high availability with fault tolerant automatic failover

Secure Communications

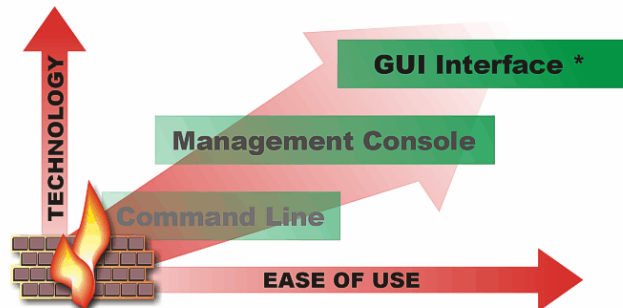

Now that your internal network is shielded, what about information exchanged between your corporate partners and remote workers? Virtual Private Networks are the industry accepted method of securely transmitting data over the Internet. Trustix Firewalls use the IPsec protocol to encrypt data transmitted over the 'net- extending the security of your network to all arms of your business. Communications between your office and home users are protected using 168-bit 3DES encryption- triple the encryption, triple the security!

Furthermore, Trustix Firewalls use Public Key Infrastructure X.509 certificates for authentication of employees working remotely within the VPN environment- all controlled from a single interface. The industry standard Diffie-Hellman (DH) process of public key encryption is utilized by our firewalls, guaranteeing that messages and files transferred between your office and your external workforce are thoroughly secure.

Plug and serve

As with all Trustix products, our Firewalls are designed to be as easy to setup as possible. A Turnkey solution, your Firewall will be out of the box and implemented in an unbeatable 25 minutes- and without the need for a dedicated systems administrator
