

Mail Server- Take Control of Your Electronic Communications

E-mail is generally considered to be the most important service provided by the internet.

It enables businesses to communicate with home workers, colleagues, branch offices and customers alike- oiling the wheels of modern e-commerce on a local and worldwide level.

Therefore, the secure and reliable delivery of messages is of paramount importance to any organization, and with most ISP's dropping mail on a daily basis, there is the need for a stable and efficient dedicated mail server.

Essential features, unparalleled ability

Trustix™ Mail Server acknowledges these demands and provides a robust, secure and highly proficient mail delivery system. Compatible with existing mail software (e.g. Outlook Express) and easily configurable with the intuitive Xploy Management Tool- Trustix™ mail server can be assimilated into your current network environment with seamless ease. Supporting the SSL (Secure Sockets Layer) protocol for encrypting critical information and using the industry standard SMTP protocol for transmitting mail- Trustix™ Mail Server is also the safest way to communicate with the world. There is the additional benefit of blacklisting and **spam filter support**- no more inboxes full of unsolicited messages- just the communiqués you want – quickly and securely.

- **Accelerate** message delivery with dedicated SMTP mail relaying
- **Liberate** your workforce with one-click web based mail
- **Secure** your mail using SSL encrypted IMAP 4 connections
- **Eliminate** counter-productive spam with integrated Spam Filter
- **Expand** network functionality with advanced multiple domain support
- **Simplify** administration with Xploy® centralized management tool

Seamless integration, Simple deployment

"E-mail servers rank high in difficulty to install and manage- so it's important to look for servers that provide ease of use." (Nelson King, ServerWatch)

The Trustix™ Mail Server embraces this philosophy completely by using the highly intuitive Xpjoy GUI to edit and configure services, users and policies. A platform independent utility, it allows the administration of the server from any Windows or Linux desktop, with maximum security and without the need for specialist IT training. Xpjoy takes server configuration out of the realm of the professional and into the hands of the administrator.

The mail server incorporates and extends the popular and proven mail server, Postfix. Postfix replaces and supercedes the older Sendmail UNIX facility and is over 3 times faster than its nearest competitor- ensuring speed and security in the dissemination of your bulk mail.

Compatibility nightmares are also consigned to history with Trustix™ Mail Servers. By supporting all major existing e-mail software (Outlook, Netscape Messenger etc) and utilizing the industry standard SMTP protocol, the Trustix™ Mail Server will harmoniously integrate into your current network setup without difficulty or stress. Whether you use Microsoft, Linux or UNIX- Trustix™ guarantees a seamless transition to your new mail server!

Trustix™- Security Incarnate

Trustix™ is the leading provider of data security and this lineage is fully implemented in the Trustix™ Mail Server. Based on Trustix™ Secure Linux Enterprise- the most secure and reliable operating system for enterprise server applications- and employing Secure IMAP 168 bit encryption protocol our mail servers will ensure that your crucial messages and documents are transferred in an uncompromisingly secure environment. Rest assured- Trustix™ protects.

As a turnkey solution (from box to implementation in an unbeatable 25 minutes), Trustix™ mail servers are painless to setup- allowing you to concentrate on more pressing concerns!

Scaleable to *your* business

Whatever the size of your enterprise or user base, Trustix™ has a mail server specifically scaled to meet your requirements- at a cost that beats our competitors at all price points. Your new mail server will optimize your mail performance based on your chosen hardware- thus presenting your organization with immediate and maximal return on investment.

Trustix™ Mail Server- Optimize your communications

Feature Spotlight

Empower your mobile workers

Trustix™ Mail Servers provide you with the ability to view your company e-mail from anywhere in the world. Web-based e-mail is a flexible and effective method of keeping in contact with your organization- affording home and mobile workers the same connectivity as site based employees. Trustix™ Mail Server uses SquirrelMail to enable web-based viewing through an encrypted SSL connection. (SquirrelMail is a web based mail client with support for MIME, address books, and folder management- suitable for both POP3 and IMAP users)
