

Trustix™ Proxy Server SE

Implementing Trustix™ Proxy Server SE on your office network will deliver immediate improvements in internet and file access times- transforming idle waiting periods into productive uptime.

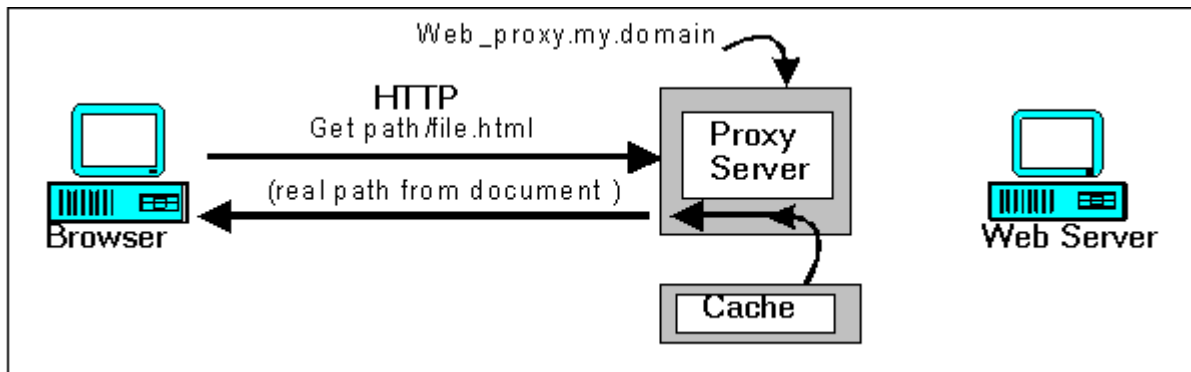

Cache Savings

Caching documents can save users considerable time when they request documents normally located out on the Internet. A proxy server can serve these documents much more quickly than remote servers. In addition, caching a document that many users need can save considerable network cost and connection time. Caching can also reduce the amount of disk space browsers use because many local browsers can use a single copy of a cached document.

Trustix™ Web Server stores files and internet pages in a cache for future access

Caching is disk based; when you restart the server, documents that you cache are still available. If you want, you can also configure the proxy server to use only the local cache. For instance, you can provide Internet documents to local browsers that do not have an internet connection.

Upon a 2nd request for the files, Trustix Proxy Server retrieves the information from the cache and delivers it instantaneously to the client workstation- eliminating the need for access to the web server.

Using Trustix™ Proxy Server to cache files in this way will liberate your workforce from prolonged waiting and significantly reduce network traffic- meaning time can be utilized more productively and profitably.

Trustix™ Proxy servers can speed up browsing times from between 50 -80 %

Remove the manacles on your network- Realize the potential of your business.
