## Trustix™ Firewall

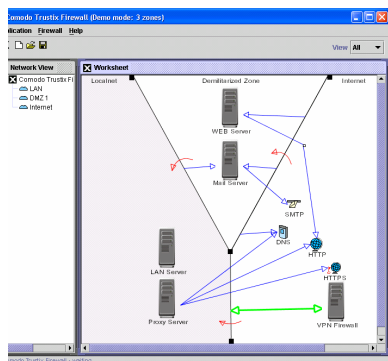

Many IT experts consider firewalls to be the most important aspect of any organizations security infrastructure. Sitting between your internal network and the outside world (Internet, External Servers, Branch Office networks, Wireless connections etc), a properly configured firewall is vital to the prevention of destructive attacks from hackers, Trojans, worms and virus propagators.

Trustix™ Firewall is the guardian of your network, a sentinel that will blockade and repel malicious attacks to your network from hackers and infected files. If a file or packet does not comply with your security policy then it shall not pass the Trustix™ Firewall. Using packet- filtering technology, the Trustix™ firewall also acts as a fully featured router to accelerate the transmission of data throughout your network- no more bottle necks due to time consuming proxies. Combine this with the added safety that comes with Trustix™ Firewall's Network Address Translation facility (or 'masquerading'- the only IP address visible to the outside world is the Firewall gateway) and you have the world's most accomplished network protection device. Your network just became Fortress Trustix™.

## Secure Communications

Now that your internal network is shielded, what about information exchanged between your corporate partners and remote workers? Virtual Private Networks are the industry accepted method of securely transmitting data over the Internet. Trustix™ Firewalls use the IPSec protocol to encrypt data transmitted over the 'net- extending the security of your network to all arms of your business. Communications between your office and home users are protected using 168-bit 3DES encryption- triple the encryption, triple the security!

Furthermore, Trustix™ Firewalls use Public Key Infrastructure X.509 certificates for authentication of employees working remotely within the VPN environment- all controlled from a single interface. The industry standard Diffie-Hellman (DH) process of public key encryption is utilized by our firewalls guaranteeing that messages and files transferred between your office and your external workforce are thoroughly secure.

## Trustix™- the inventors of WYSIWYG Firewalls

All the security that Trustix™ firewalls endow upon your business would be for nothing if it was impossible to implement. Trustix™ take a truly revolutionary approach to the recondite issue of firewall configuration using a perspicuous and highly intuitive WYSIWYG interface. The easily used GUI enables you to visualize and configure your firewall policy, DMZ's (up to 24 zones), port forwarding, network address translation and virtual private network settings in a clearly intelligible manner- no more arcane command lines or constant administrative stress. Most importantly, the underlying rules generated by the program are then fully optimized before being deployed- thereby optimizing the security and performance of your firewall's architecture, and avoiding errors and duplications. You may never need a systems administrator again!!!

### Plug and serve

As with all Trustix™ products, our Firewalls are designed to be as easy to setup as possible. A Turnkey solution, your Firewall will be out of the box and implemented in an unbeatable 25 minutes- and without the need for a dedicated system administrator.

### A proven track record

Trustix™ Firewall is part of a family of products provided by Trustix™ Linux Solutions- the pre-eminent force in information security. Based on the Linux, the most reliable and robust OS for Enterprise Server Applications, Trustix™ products will reduce the total cost of ownership to your company over their operational lifetime. Each product is a Turnkey solution (use straight out of the box) and benefits from the platform independent Xploit utility – you can organize your servers and network services with a simple point and click interface- no more impenetrable command lines!! If you *do* encounter any problems then your company will enjoy unsurpassable support from our team of dedicated and tenacious technicians.

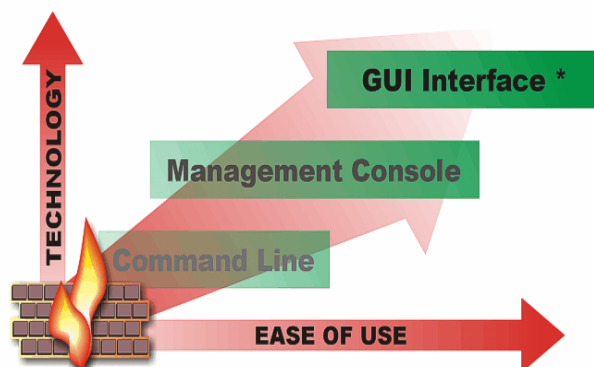

### Bespoke solutions

Whether you are running a small business or a multi-national scale corporation, Trustix™ firewalls have a solution to meet your needs. Our Firewalls are scaleable from the ease of use needed by an SMB to the water-tight security and stability demanded by a government. Depending on your requirements, Trustix™ Firewalls are available from 224 Demilitarized Zones and represent superb and immediate ROI at all price points.

Automated Software Maintenance means updating your Trustix™ firewall is a painless task. Patches to ensure maximum stability are immediately implemented using the SWUP (Software Update) utility. Your firewall will never be outdated in a world of increasingly sophisticated threats to your information's integrity.
