Trustix™ LAN Server

As part of a co-ordinated computer networking strategy, there is no single appliance of greater importance than a dedicated Local Area Network server. LAN's represent the next stage of evolution over sprawling, inefficient peer-to-peer networks- providing a centralized server connected to all workstations and providing effective sharing of directories, files, printers and other hardware resources.

The Trustix™ LAN server can provide the backbone for your organizations network. Based on Trustix™ OS- the most secure and stable platform for enterprise solutions- Trustix™ LAN servers are designed to replace or complement existing Windows® or UNIX® servers- at a fraction of their price and with no compromise in functionality.

Keeps pace as your business grows

As your business expands, your network grows larger and the demands placed on it grow ever more intense. Network traffic will slow down, information could be lost and communications between employees impaired. The demands placed on resources such as printers will lead to unacceptable queuing times. Trustix™ LAN servers will absorb all this extra traffic and provide a stable and effective platform for the distribution of resources and control of hardware resources. Your Trustix LAN represents outstanding ROI- paying for itself from day one- and it becomes more valuable with each additional user- The law of diminishing returns does not apply here!

In harmony with your current network

Trustix™ LAN server acts as a Primary Domain Controller for Windows workstations- authenticating usernames and passwords in order to log into the network and access resources. Due to the server's flexibility, it can replace or co-exist with any Microsoft Windows Server- ensuring the utmost integration with your existing infrastructure. Similarly, Trustix™ LAN is compatible with UNIX NFS and Windows operating system via compliance with the Windows file sharing protocol, SMB (using the Linux Samba engine.) It can also run as a Windows domain logon server.

As well as providing complete Windows networking support, Trustix™ LAN can also adopt the role of your network WINS server- resolving the names and IP addresses of all your computers. Incorporating a DHCP server for managing automatic IP addressing- Trustix™ LAN server is as powerful as it is versatile.

Linux?

Linux inherits all of UNIX's peerless networking abilities and is the ideal basis for Trustix™ OS- the easily configurable bedrock of Trustix™ LAN servers. A Linux based solution represents a lower cost/greater stability replacement for traditional Windows/UNIX/Netware servers.

Stable, Efficient, Easily Configurable and Inexpensive. Could you ask for more?

A proven track record

Trustix™ LAN Server is part of a family of products provided by Trustix™ Linux Solutions- the pre-eminent force in information security. Based on the Linux, the most reliable and robust OS for Enterprise Server Applications, Trustix™ products will reduce the total cost of ownership to your company over their operational lifetime. Each product is a Turnkey solution (use straight out of the box) and benefits from the platform independent Xploy utility – you can organize your servers and network services with a simple point and click interface- no more impenetrable command lines!! If you *do* encounter any problems then your company will enjoy unsurpassable support from our team of dedicated and tenacious technicians.

Trustix™ LAN servers will consummately manage your network's resources. Enabling effective sharing of files and resources to promote teamwork, seamless integration with existing infrastructures and immediate increases in productivity.

Trustix LAN server- the backbone of your network.
